TWTG Opens US Entity

Readiness to deal with strong demand in North America

Rotterdam, 15th March 2022. TWTG is proud to announce the incorporation of their US entity. As a response to the growing demand for TWTG's Industrial IoT Solutions in the Americas region, the scale-up from Rotterdam has opened up their US branch.

"Our international expansion is at an exciting stage now," comments Nadine Herrwerth, Managing Director at TWTG. "It will allow us to better serve our US and Canadian customers. We will be easier to do business with and will create a knowledge base from the US on which we can build in the years to come."

TWTG has, over the past two years, established themselves as a supplier to the leading players in the European oil and gas Industry, thereby creating credibility and trust within these multinationals. This trust is now being rewarded with the North American counterparts of these very same companies following suit on their European colleagues.

Herrwerth continues: "We're extremely proud of where we have got to and will continue our drive to bring well-designed and highly certified I-IoT devices to the global market."

The majority of devices within the TWTG NEON product range are already fully certified for operational use in the US and Canada, with the remainder due for certification by September.

About TWTG

TWTG is I-IoT. For us, the Industrial Internet of Things is much more than just technology. It is the methodological innovation of monitoring, tracking, and activating critical assets within a business. It is the vision of utilising information based on big data analytics to gain strategic value and streamline operations. TWTG is an ISO 9001 & 27001-certified company with industrial grade solutions and a roster of international clients in industry, safety, and energy. The scalability of solutions is at the forefront of all thinking; from product, hardware, and software design, to connectivity and implementation, also including retrofitting of existing infrastructure and business models.
