Some of the ingredients in Amiclear work by blocking the absorption of glucose in the gut. This means that less glucose enters the bloodstream, which can help to lower blood sugar levels.

Other ingredients in Amiclear work by improving insulin sensitivity. Insulin is a hormone that helps the body use glucose for energy. When insulin sensitivity is improved, the body is better able to use the glucose that it produces, which can also help to lower blood sugar levels.

Inflammation and oxidative stress are both factors that can contribute to the development of type 2 diabetes. By reducing inflammation and oxidative stress, Amiclear can help to protect against the development of type 2 diabetes and improve blood sugar control in people who already have the condition.
