The nootropic compound is based on traditional medicine that helped Asian predecessors maintain excellent brain function and strong memory regardless of age.

According to the developer, [Brain Savior](#) tackles the source of cognitive difficulties. Contrary to the majority of nootropics, it does not disguise the signs of cognitive deterioration. Instead, it eliminates the underlying reason and improves brain health, hence decreasing the likelihood of developing brain-related issues.

Mindful Wellness is the manufacturer of the supplement Brain Savior. According to the official website, the supplement employs ultra-pure and scientifically proven substances to improve brain health and eradicate any problems.

How does the Brain Savior supplement work?

The Brain Savior dietary supplement contains numerous substances that enhance the brain's function. The developer, Joseph Thomas, says that the nootropic targets the fundamental causes of memory issues: neuro-inflammation and leaky brain syndrome.

The modern environment is rife with neurotoxins that cause a significant deterioration in brain health. Toxins may be found in the air, water, food, and personal care products, among other locations. Therefore, these neurotoxins are very hard to avoid.

Blood-Brain-Barrier is a defensive mechanism that protects the brain (BBB). This barrier stops harmful chemicals and poisons from entering the brain. In Leaky Brain Syndrome, however, the buildup of memory-eroding poisons weakens the BBB, enabling infections to access the brain. As a result, the brain develops inflammation, which degrades cell health and neuronal function.

[Brain Savior](#) promises to include the nutrients and minerals necessary to build the Blood-Brain-Barrier and prevent neurotoxins from damaging healthy brain cells. In addition, the cognitive enhancer promotes brain cell regeneration, restoring years of brain damage. In addition, it contains substances that stimulate the creation of neurotransmitters, so enhancing the connection between neurons and various muscles.
