2) The first post today could be a test.

Or it may contain a message.

There are lots of possible interpretations (December, Declass, etc) but I prefer not to guess at this point.

3) I'm certain if this was a test or a coded message.

Lots of possibilities.

No clear interpretation, yet.

11) Project Looking Glass is a software project that allows users to display 3D windows including windows that are reversible.

"Going Forward in Order to Look Back."

Q

https://en.wikipedia.org/wiki/Project_Looking_Glass

Project Looking Glass

Project Looking Glass is a now inactive free software project under the GPL to create an innovative 3D desktop environment for Linux, Solaris, and Windows. It was sponsored by Sun Microsystems.

Looking Glass is programmed in the Java language using the Java 3D system to remain platform independent. Despite the use of graphics acceleration features, the desktop explores the use of 3D windowing capabilities for both existing application programs and ones specifically designed for Looking Glass.

There is a Live CD available from Project Looking Glass. The Looking Glass environment is also included on a Live DVD (FunWorks 2007 edition) from the Granular Linux project.

History [edit]

Looking Glass was first developed by Hideya Kawahara, a Sun programmer who wrote it in his spare time on a small Linux laptop. After demonstrating an early version to Sun executives, he was assigned to it full-time with a dedicated team and open sourced the project.^[1] It was first demonstrated publicly by Jonathan Schwartz at LinuxWorld Expo 2003 in San Francisco, and since then has gathered momentum in development.^[2] After unveiling the prototype, Steve Jobs called Schwartz's office and told him that Apple would sue Sun if they moved forward to commercialize it. Jobs claimed that the project is infringing Apple's IP.^[3] Regardless of the threat, Sun determined that the project was not a priority and decided not to put more resource to develop it further into product quality. The project thus had been continuing in an experimental mode. However, Sun's financial situation became tighter and the management determined they had higher priority projects on their hands. The project has been inactive (practically dead) since late 2006.^[4]

Features [edit]

One of its most notable features is the creation of reversible windows. This capability can be used for features like allowing the user to write notes and comments on the windows' backs, or displaying application dialogs without risking their being detached from the application they relate to. All windows start by looking like a normal 2D or 2.5D window, but can be manipulated as thin state-like 3D objects which can be set at any angle or turned completely around by the user.

Other features include tiling all the window to assist the user to pick up a desired window, provision of a panning virtual desktop, icons that reflect the live status of the window they represent and zooming of a window when it receives focus.

There are a few designs that Looking Glass implemented which appeared in other products in later years. One technique became popular by Apple's Dashboard widgets is configuration of an application (widget) by flipping its visual and performing updates on the backside of it. The visual of Apple's macOS Dock became similar to Looking Glass's look when Leopard was released.^[5] Windows 7 implements a feature for window selection that hides other windows than the one that the user placed the mouse cursor on a thumbnail above the taskbar. It resembles

Configuring an application using its backside of the window represented as a 3D state in the 3D engine.
