SPECIALIST IT AND CYBER SECURITY SERVICES

Cyber Security Experts.

INFOSEC CLOUD

Cyber Security Experts

For over 15 years, we have helped thousands of organisations of all sizes, across every sector, with an ever-evolving range of IT and cyber security requirements. Infosec Cloud is formed of cyber security experts who are ready to assist with your needs at whatever level.

Functioning as both a vendor of our own fully managed services (Cyber Security Awareness) and a traditional value added IT security reseller (Cyber Protect Solutions and Cyber Care Assurance), our unique postion means we have a vast experience of recommending, delivering and supporting only the best solutions and services that fit your requirements.

WEB SECURITY

WEB SECURITY

The network perimeter has changed. Practically overnight, almost every employee became a ‘remote worker’ and potentially risking exposing the security of their web usage to an unprecedented level of threats.

Although many organisations are benefitting from productivity when adopting or leveraging cloud applications to support remote working, this has also created a complex threat landscape which needs to be addressed with some urgency. The introduction of an extraordinary volume of ‘shadow IT’, has raised the threat landscape even further.

Existing IT systems were generally architected to route all web traffic through specific access points, such as the organisation’s headquarters or regional offices where security could be enforced and easily monitored and maintained.

Our Web Security solution provides protection for roaming, personal (BYOD) and guest devices with zero-touch configuration. With no requirement to proxy web traffic, your users are guaranteed ultra-fast response times.

Subscriptions available:

- Monthly
- Annual
- Multi-year
- Bundle (upon request)

Proven to Provide:

- Protection from web-borne malware attacks
- Deep inspection of SSL/TLS traffic
- Real-time traffic analysis with URL reputation and threat intelligence
- Website Page level categorisation
- “Not Safe For Work” Image Content Analysis

Benefits to your organisation:

- Low maintenance
- Easy to deploy to office based and mobile users
- Free migration from your existing solution

CLOUD ACCESS SECURITY BROKER

sales@infosec-cloud.com
infosec-cloud.com
01256 379970

CLOUD ACCESS SECURITY BROKER

Approved access to cloud applications is essential in today's changing working environments, even more relevant with the recent influx of necessitated remote workers.

Users are now finding a multitude of cloud solutions to communicate and share information on that they see as necessary to enable them to continue to provide the high levels of performance they did in an IT secured location.

Without visibility of the access and utilisation of these services, the threat of advance malware, data security and malicious or accidental insider access is on the rise. The usage of Social Media, data storage and CRM's is un-managed and un-monitored and can be easily abused.

A Cloud Access Security Broker (CASB) solution gives an organisation the ability to discover, analyse, secure and manage cloud activity. This is regardless of whether the user is on the corporate network or working remotely.

Our Web Security solution provides protection for roaming, personal (BYOD) and guest devices with zero-touch configuration.

With 140 categories and 500+ sub-categories, you can be assured of your web security.

Subscriptions available:

- Monthly
- Annual
- Multi-year
- Bundle (upon request)

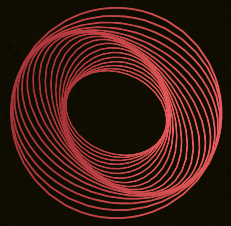
Proven to provide:

- Complete visibility of internet services usage
- Compliancy for regulations such as PCI DSS, GDPR and HIPAA
- Data Security that scans files upon upload and can change specified content using DLP templates
- Threat Protection for those cloud apps that are being targeted with increasing sophistication and volume
- Malicious or suspicious user activity tracking, identification and management

Benefits to your organisation:

- Roaming, Guest and BYOD protection with zero-touch configuration
- Proxy-free ultra-fast response times
- Control of your organisation's users use of Social Media, Data Storage and CRM content

sales@infosec-cloud.com infosec-cloud.com 01256 379970



EMAIL SECURITY

EMAIL SECURITY

Email security has been long hailed as a “must have” for any organisation. This, of course, is still true.

With an unparalleled growth in threats including areas such as CEO fraud and other impersonation attacks, organisations need to be assured that their security develops to stay ahead of these threats.

Has your email security solution evolved to meet today’s threats though? Have you remained with your provider because “it does the job” or migrating has seemed a painstaking task?

With migration support included in our service, we can ensure your organisation has a smooth transition to a service that delivers protection against the very latest threats.

Features such as compliance assurance, dual layered sandboxing, encryption and archiving, ensure you have the multiple protection layers required for your critical email services and all within a single cloud-based solution.

Subscriptions available:

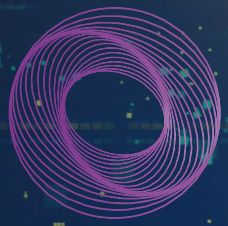
- Monthly
- Annual
- Multi-year
- Bundle (upon request)

Proven to provide:

- Unique time-of-click protection from malicious URLs
- Compliancy with archiving, business continuity and encryption
- Filtering and control of outbound email as well as inbound
- Dual layered sandboxing options
- Domain spoofing and impersonation attack protection such as CEO Fraud

Benefits to your organisation:

- 100% cloud based
- Reassurance of service availability with emergency inbox accessibility
- Free migration from your existing email security service



MULTI-FACTOR AUTHENTICATION

MULTI-FACTOR AUTHENTICATION

Multi-Factor Authentication (MFA) has been a critical component of IT security for organisations for many years.

Today, the public in general will experience MFA almost on a daily basis. Whether it is through online banking or transacting on their favourite online shopping sites. With the number of remote employees hitting levels never before experienced, the necessity of securely identifying your own users accessing your systems is now critical.

Some organisations have delayed adding this layer of security with the perception that MFA is difficult to install or deploy. Some are put off by the impact MFA will have on end-users by asking them to install an app or carry a physical token. We can provide a wealth of authentication options to satisfy any requirement.

Our solution is easy to install and deploy and has minimal impact on end-users. Whether you require a cloud or in-house solution, you want to be able to deploy and maintain the solution quickly.

We have deployed and managed MFA for our customers all over the globe.

Subscriptions available:

- Monthly
- Annual
- Multi-year
- Bundle (upon request)

Proven to provide:

- The ability for your users to manage their own preferences of authentication with choices such as SMS, Mobile App, email, soft token, hard token or even voice
- Vendor Hosted, Physical or your own cloud/VM provisioning
- Internal systems and cloud based applications supported
- Adaptive MFA that intelligently challenges users only when a risk is high
- Out of the box support for all major VPN providers

Benefits to your organisation:

- Low-touch management once deployed
- Compliant secure access to your key systems
- Single licensing model with all features included per license

EXTENDED DETECTION AND RESPONSE

Extended prevention and detection across endpoint, network and user activities, along with fully automated response actions.

Finally. A single, unified platform to prevent, detect, investigate and fully remediate attacks. Visibility across endpoint, network and user activities, plus the power of deception provides the broadest and deepest protection against all threats. EDR, on its own, is not enough.

Supported by a security operations team, 24x7x365, our XDR solution is the only solution that triggers an automated investigation following each endpoint, user, or network alert, fully disclosing its root cause and scope and applying all the required remediation activities to fully eliminate the threat.

Have you experienced a security incident? Every second is critical when you have been breached. If so, utilise our free incident response. In a matter of minutes, our XDR solution can be deployed across hundreds to thousands of endpoints, then scans, analyses, identifies and remediates threats before damage is done.

Subscriptions available:

Annual

Multi-year

Bundle (upon request)

Proven to provide:

- Total Visibility - Gain insight into every event that takes place in your environment through automated monitoring
- Consolidated Defence - Capabilities of NGAV, EDR, UBA, Network Analytics and Deception in a single, natively integrated platform
- Full Automation - Automate all workflows across the breach protection lifecycle, from proactive monitoring to incident response
- Vendor Hosted, Physical or your own cloud/VM provisioning
- 24x7x365 backed SOC manned with Security Analysts providing alerting and assistance with high risk threats

Benefits to your organisation:

- Reduce the requirement for expensive cyber security engineers
- Reassurance that a 24x7 team of cyber security professionals is monitoring for abnormal or threatening behaviours
- Incident response included for every service

sales@infosec-cloud.com infosec-cloud.com 01256 379970

NEXT-GENERATION ENDPOINT

sales@infosec-cloud.com infosec-cloud.com 01256 379970

NEXT-GENERATION ENDPOINT

Endpoint solutions have been a staple security solution for decades. What makes them 'Next-Generation' and why should you consider upgrading?

For years, endpoint security products' primary threat protection was based upon signatures, created after patient zeros were impacted and the damage already done. Assuming all attacks had been seen before, using signatures made sense. Today, malware mutates daily, even hourly, making signature-based tools obsolete, and creating the need for a stronger approach to endpoint security.

AI detects and prevents attacks before they can execute, preventing users from opening URLs or visiting spoofing pages, mimicking those of legitimate websites.

Our agent is lightweight and easy to deploy across your workforce via the cloud, hybrid or on-premise. With no signature updates or slow scans, experience protection without interruption.

Continuously protect mobile endpoints without disrupting users on any device type (including managed and BYOD).

Subscriptions available:

Annual

Multi-year

Bundle (upon request)

Proven to provide:

- AI Prevention that continuously develops as malware variants appear
- Eliminates the requirement for signature updates that are out of date as soon as they are deployed
- Faster protection with rapid deployment of lightweight agents and one-time scanning
- Full forensics capabilities to detect, trace and prevent threats and includes pre-built detection sets for Windows
- Script control, Memory Actions Protection, Application Control, Device Control and File protection all included

Benefits to your organisation:

- Knowledge that your endpoints are protected by a globally recognised leader
- Pre-execution protection that stops threats before they try to run. Competitors wait until the threat executes before trying to prevent the attack
- Low overhead of the agent and lack of signature updates improves the performance of the end device and the internet downloads

24/7 MANAGED SOC

sales@infosec-cloud.com

infosec-cloud.com

01256 379970

24/7 MANAGED SOC

(Security Operations Centre)

The cyber threat is a global 24x7x365 organised attack that doesn't concern itself about the impact on your organisation or your customers.

Organisations need to be assured that they are providing the highest level of protection for their critical assets whilst ensuring the operating costs are practical. To attempt to monitor, collate and evaluate many key services requires a sizeable investment in time, highly skilled resource and a variety of security solutions.

Our Managed SOC leverages a constantly evolving Threat Monitoring Platform for detecting malicious and suspicious activity across three critical attack vectors: Endpoint, Network and Cloud.

Based upon a per device model, with no expensive log capacity charges, we know in today's dispersed workforce, with global access to services and data, our Managed SOC is today's essential security assurance partner.

Our hardware-free SOC platform provides our customers with the assurance that their key assets are being monitored and protected. Your organisation needs to be alerted in real-time with specific, and informed, remediation help and advice.

Subscriptions available:

- Monthly
- Annual
- Multi-year
- Bundle (upon request)

Proven to provide:

- Proactive threat detection and alert services for endpoint, network and cloud services
- 24x7x365 monitoring by certified cyber security engineers trained in the latest threats
- Compliancy accreditation in areas such as ISO27001, PCI DSS and HIPAA
- Hardware free monitoring
- Real-time threat intelligence, breach detection and malicious activity monitoring

Benefits to your organisation:

- Knowledge that any event on your monitored services will be detected and alerted to immediately
- Remediation advice and assistance from proven cyber security engineers 24x7
- Key services such as Office 365, Azure, AWS, Windows, macOS all monitored without the requirement for a SIEM

sales@infosec-cloud.com infosec-cloud.com 01256 379970

MOBILE DEVICE MANAGEMENT

MOBILE DEVICE MANAGEMENT

Devices propel modern work, especially with the rise in remote working. However, they can leave a security gap if not managed correctly.

How do you control the applications, content and sites that can be accessed via your organisations' devices? An MDM (Mobile Device Management) solution is how.

Our feature-rich Mobile Device Management solution ticks all the boxes. Kiosk lockdown in particular enables you to lock devices to a single app or a few selected applications, create secure digital signage, feature a single website on a device with no further access and control device peripheral settings such as brightness and volume.

Security features include the ability to secure, encrypt, lock or even wipe your corporate data from devices. Centrally monitor applications installed on devices. Blacklist unwanted applications. Whitelist necessary applications to block all the rest. Enforce auto lockdown of corporate devices when they stay offline for a specified number of days.

Subscriptions available:

Monthly

Proven to provide:

- Application Control and Containerisation
- Content Filtering
- Data, Email and App Security
- Kiosk Lockdown
- Real-time Monitoring and Geofencing

Benefits to your organisation:

- Easy implementation and deployment with compliance checklists available
- Pre-configuration and password management of all key services such as WiFi connectivity and application control
- Remote wipe, lockdown and IT support access for end-user's devices

DLP AND DATA GOVERNANCE

sales@infosec-cloud.com

infosec-cloud.com

01256 379970

DLP AND DATA GOVERNANCE

Data is at the centre of most modern cyber-attacks. You need to know where your data is, that it is classified and that it is protected.

With the rise of insider threats, phishing, malware and accidental exposure, Data Loss Prevention (DLP) is more important than ever before. However, up to now, DLP solutions have not been well-adopted by organisations due to the lengthy setup, complex installation procedures, high level of maintenance and poor return on investment. Typically the metrics of data have been difficult to understand and therefore not useful to organisations looking to protect their data.

Today, DLP needs to include Data Governance. Together these will help your organisation understand the sensitive information that exists, where it is located, and the type of interactions the data has with systems and users. Once you have a full understanding, applying rules to how the data will be used by staff, and external parties such as supply chain companies, is a straightforward process.

Our DLP solution is designed to deal with the challenges of big data growth, flexible working, new technology adoption, and the ever increasing use of cloud services.

Subscriptions available:

- Annual
- Multi-year
- Bundle (upon request)

Proven to provide:

- Rapid installation with easy cloud deployment
- Out of the box pre-defined rules
- Pre-set metadata and key words
- File type agnostic scanning / content level fingerprinting / OCR capability
- Structured and unstructured data

Benefits to your organisation:

- Deploy in minutes with minimal impact to your end users
- Complete data discovery and classification across Files Shares, Office 365, Box, Dropbox, Exchange, Azure, Sharepoint and any ODBC compliant databases
- End-User ability to classify data at generation that is also double checked against the DLP rules engine

sales@infosec-cloud.com
infosec-cloud.com
01256 379970

SD-WAN

SD-WAN

The SD-WAN changes the rules of the game for networks. SD-WAN gives back instant control of the WAN to those that need it – you and your organisation.

Up until now legacy WAN connections have been complicated, with low bandwidth due to costs and resilience, expensive to maintain and painfully time-consuming to change. This is an unacceptable inhibiting of rapid innovation and growth.

SD-WAN enables IT to leverage different network technologies as a matter of policy and easily manage services over the network, giving control back to you, the customer.

Having instant access to your critical security requirements at the right time and in the right place is no longer optional in today's dispersed network connectivity requirements.

Our unique position, as an accredited Cisco Viptela and Meraki SD-WAN Managed Service Partner, means we are experts at helping organisations transition to SD-WAN, helping reduce costs and gain competitive advantage though our deep understanding of technology, infrastructure and software-defined solutions.

Subscriptions available:

Annual

Multi-year

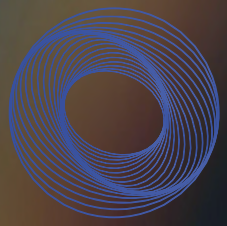
Bundle (upon request)

Proven to provide:

- Use the Internet to augment, or completely replace, MPLS through any form of connectivity and switch carriers, mix and match, using Leased Lines, Broadband and Cellular networks
- Achieve unbeatable network visibility and control
- Reduce WAN infrastructure costs by up to 90% and mitigate risk
- Achieve greater performance with higher overall bandwidth and resilience
- Create Hybrid WAN environments using multiple connections (MPLS, Internet, 4G LTE and more) and any combination of suppliers (carriers)

Benefits to your organisation:

- Simplify branch connectivity and securely deploy a branch in minutes – not weeks/ months
- Deploy and manage key applications for your users to enjoy optimal performance and productivity from a single console
- Take advantage of simple, portal-based automation, analytics and orchestration to manage security requirements and improvements on overall performance



THIRD - PARTY RISK MANAGEMENT

THIRD-PARTY RISK MANAGEMENT

With cyber-attacks originating from third parties on the rise, and privacy concerns driving new regulations, it is critical to ensure that your suppliers are securely managing sensitive systems and data.

However, manually collecting, maintaining and analysing risk status is time consuming, inefficient, error-prone and costly. Our Third-Party Risk Management (TPRM) cloud-based solution simplifies and speeds compliance and risk reduction with our unified, automated Third-Party Risk Management platform.

Our solution combines automated, standardised vendor risk assessment with vendor risk monitoring, assessment workflow and remediation management across the entire vendor life cycle.

The platform is complemented by vendor intelligence networks offering on-demand access to completed, standardised risk reports on thousands of organisations.

Subscriptions available:

Annual

Multi-year

Bundle (upon request)

Proven to provide:

- Proven Third Party Risk Management maturity process
- Continuous monitoring and prioritised remediation
- Automated assessments
- Shared vendor networks
- Stakeholder-specific reporting

Benefits to your organisation:

- Real-time insights into both cyber and business risks from over 500,000 sources
- Easy vendor onboarding and automated conducting of assessments
- Partnered to provide human support for you every step of the way

Microsoft 365

LICENSES

We can instantly save you money on your Microsoft 365 licences.

Infosec Cloud is a Tier 1 CSP with Microsoft. This means that we provide the best available Microsoft 365 pricing in the UK. Switching your provider to us is easy and we guarantee zero downtime during the process. Follow our 3 steps to start saving on your licenses:

Step 1
Request a quote or call us on 01256 379970 to see how much you can save

Step 2
Accept us as a partner on your Microsoft 365 account

Step 3
Switch your licenses with zero hassle and zero downtime.

LICENSE AUDIT

Our Microsoft Certified Professionals will conduct an extensive utilisation review to identify any misconfigurations that may have occurred during the setup and build of your Microsoft 365 environment.

We will help identify those areas that are either threats, or can be enhanced, in a comprehensive report that will support the mitigation of any of the risks identified.

SECURITY AUDIT

With functionality often being the priority during the setup of Microsoft 365, often the cyber security aspect can be overlooked.

Our certified professionals will conduct a comprehensive configuration review to identify any misconfigurations that may have occurred during the setup and configuration of the Microsoft 365 environment.

We will help identify these threats and provide a comprehensive report that will support the mitigation of any of the threats identified.

BACKUPS

Cloud-to-Cloud SaaS Backups.

Powerful yet easy-to-use SaaS data protection for Microsoft 365, G Suite and Salesforce enabling administrators and users to restore data and get back to work in just a few clicks.

Safeguard all your critical data from Exchange Online, SharePoint Online, OneDrive and Microsoft Teams with cloud-to-cloud backup and recovery specifically designed for Microsoft 365.

PENETRATION TESTING

sales@infosec-cloud.com
infosec-cloud.com
01256 379970

PENETRATION TESTING

Malicious attackers don't work office hours and threats don't stop evolving after a penetration test.

Our security assessments can be active 24x7x365 a year through AI powered scanners and combined with a human triage to produce meaningful, actionable results. With a global elite team of over 1,500 cybersecurity researchers, each vetted and continuously curated, your key systems are tested by a combined expertise your attackers cannot keep up with.

With patch verification services and a customer specific Attacker Resistance score, you have the information you've always wanted constantly at hand and all backed by continual assessment by the Mission Operations team.

Providing complete control to you, the customer, we provide portal access where you can stop or pause testing at the touch of a button.

Of course, all of our services are there to assist your compliance requirements whether they are PCI, NIST or ISO. All of our testing can be CREST or CHECK accredited.

Penetration testing has previously been unachievable at this scale of complete protection and global threat testers.

Subscriptions available:

Annual

Multi-year

Bundle (upon request)

Proven to provide:

- 4x higher ROI than traditional penetration testing
- 3x more time spent on targets than traditional penetration testing
- 20% reduction in failed patches due to patch verification processes
- Industry benchmark scoring for your organisation's security level
- Services backed by a true AI scanning tool

Benefits to your organisation:

- Knowledge that your key systems are continuously being tested by the most elite hackers and tools available
- Complete organisational anonymity on any risks discovered
- Always-on active penetration testing to protect against the most diligent attacker

VULNERABILITY ASSESSMENT

VULNERABILITY ASSESSMENT

A Vulnerability Assessment is only as good as the last time your systems were checked. Within an hour, your organisation could be at risk again.

Our Vulnerability Assessments can be scheduled to run as regularly as you require. We can run assessments on just those systems that have been highlighted as a high risk to provide you with regular updates on your progress to mitigate any of those specific areas.

Scanning your system regularly for threats, open ports and vulnerabilities is the easiest and most cost-effective way of taking control of your security, because it exposes invisible threats before they become a problem.

We can provide a fully managed service identifying and providing remediation advice in the timeliest manner. If you prefer, you can have full access to your own management console. You can even have a combination of our managed service and still have full visibility.

Vulnerability exposure should be the first consideration in your organisation's security strategy, without it everything else you have in place won't protect you.

Subscriptions available:

- Monthly
- Annual
- Multi-year
- Bundle (upon request)

Proven to provide:

- Full CVSS scoring methodology so you know exactly what areas should be prioritised
- Industry recognised CVE cyber security vulnerability analysis
- Integration capabilities for existing investment into your own SIEM or PSA
- Scans of whole ranges or individual IP addresses
- Fully compliant reports for PCI ASV

Benefits to your organisation:

- Monthly billing on a per IP basis for complete clarity of the systems usage and run as many scans per month per annum as you like
- Fully scalable from single IP addresses to multi-national requirements and from boot up to scanning your networks in less than 5 minutes
- A fully managed service, your own portal access or a hybrid service to you meet your own specific needs

NETWORK INVENTORY

NETWORK INVENTORY

The weak link in your security chain may be sitting right in front of you!

Every piece of hardware in your organisation – PCs, servers, printers, laptops – may be housed in your office and all are exposed to the outside world via the internet, the cloud and wireless and Bluetooth connections.

They can be full of unused data and applications, running a slow CPU, vulnerable to attack or just not fit for purpose anymore.

Ineffective or aged hardware can seriously hinder an organisation's productivity, especially as update patching may not work on older machines.

All IT has a shelf life, so protect your assets with a Network Inventory.

Proven to provide:

- Full asset inventory
- Hardware lifecycle report
- Full user count
- Password strength assessment
- Connection speed tracker

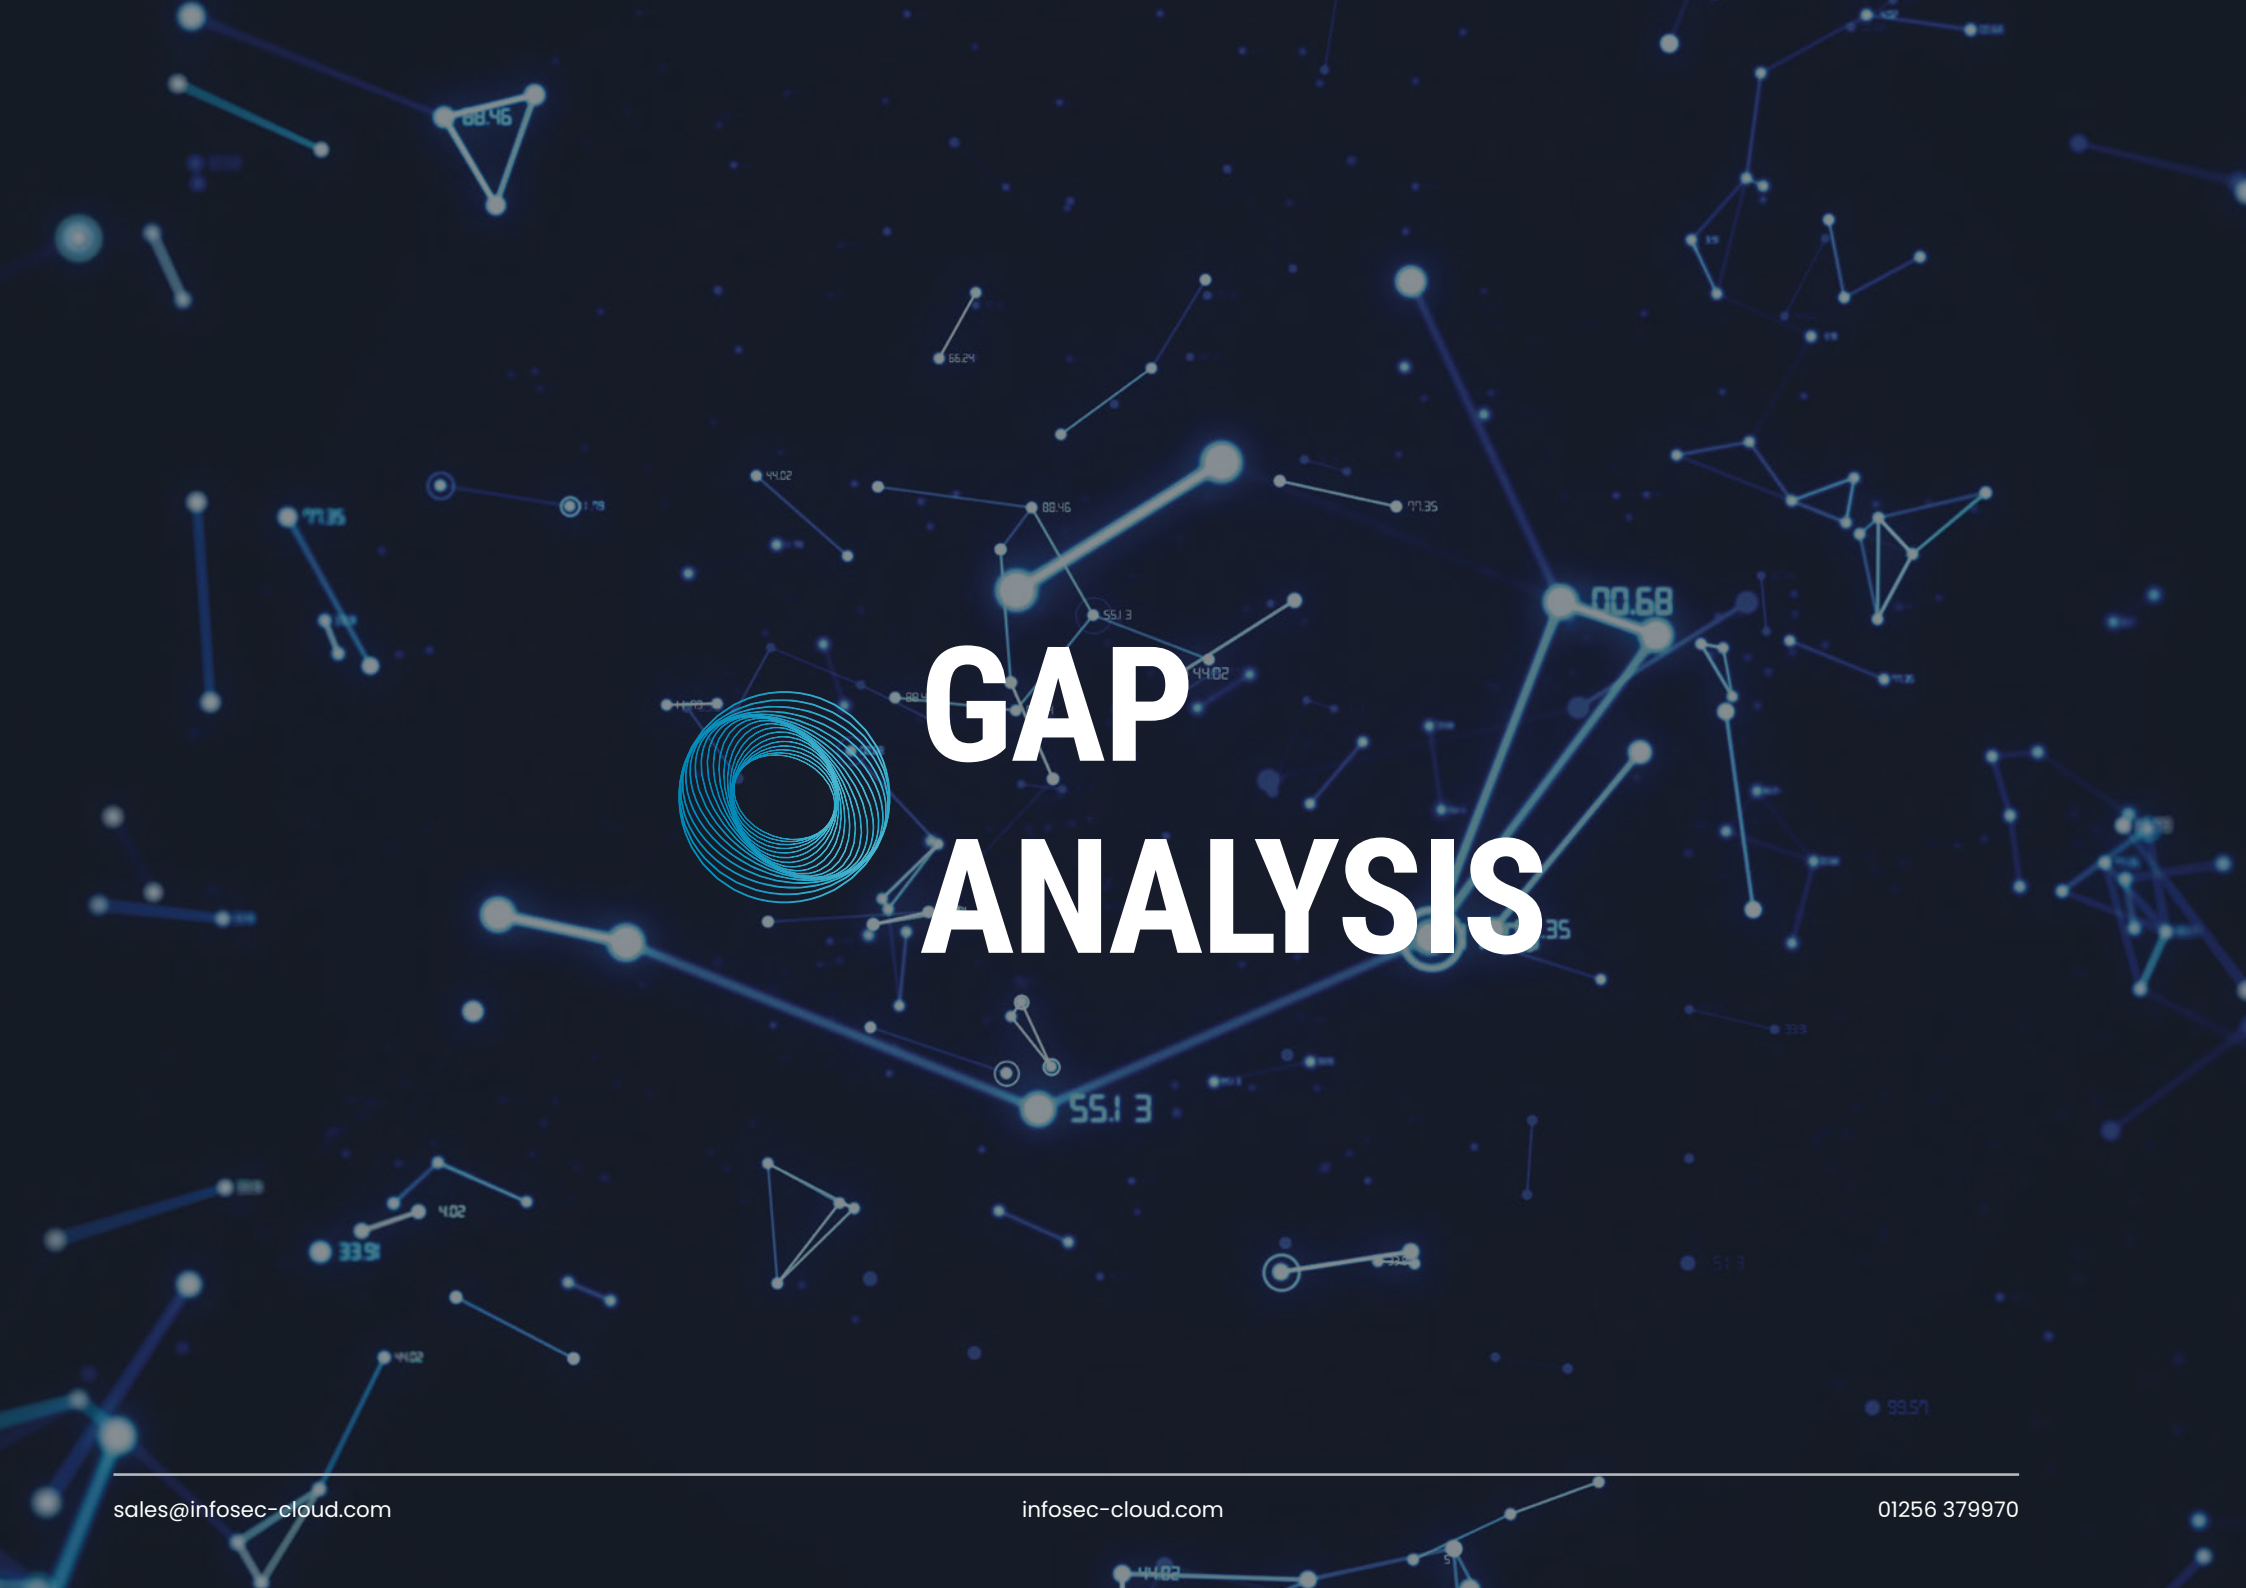
Benefits to your organisation:

- Bolster your security through hardware
- Boosts productivity
- Speed up hardware

Subscriptions available:

Monthly
Bundle (upon request)

sales@infosec-cloud.com infosec-cloud.com 01256 379970



GAP ANALYSIS

GAP ANALYSIS

Could your organisation be breached?

Unfortunately, most organisations only find out where their weak points are after a breach has occurred. This is a dangerous and costly way to understand where your resilience could be improved.

Using our expert and accredited consultants' knowledge and experience, we have constructed a free, online IT security gap analysis service to help you proactively identify the areas of your organisation's network, infrastructure and cyber security posture which can be enhanced.

CyberGAP comprises of multiple modules and multiple choice questions which you answer to score your organisation's security posture. At the end you will receive a detailed report, tailored to your selections, outlining all of the great areas of your network and infrastructure, and areas which can be improved along with recommendations on how to do so.

Proven to provide:

- A thorough IT security assessment built from the Cyber Essentials Plus framework
- Detailed and scored reporting
- Reassurance on existing systems configuration and policies
- Easy to use web portal with complete confidentiality
- A GAP analysis that is completely free of charge

Benefits to your organisation:

- Improve your IT security posture
- A Senior Management ready report
- Cleary identify those areas most providing risks or lack of compliancy

CYBER ESSENTIALS ACCREDITATION

sales@infosec-cloud.com
infosec-cloud.com
01256 379970

CYBER ESSENTIALS ACCREDITATION

If you want your customers, suppliers and staff to trust your commitment to cyber security, why not prove that you are up to industry standard?

Cyber Essentials is a government-backed, industry-supported scheme that helps organisations protect themselves against common online threats and ensures organisation-wide best practice.

This accreditation - created by the National Cyber Security Centre - demonstrates that your organisation, no matter its size, is taking cyber security seriously. Your certification can mean your organisation is less likely to be targeted and more likely to be considered when customers are looking for a partner that takes cybercrime, GDPR and security seriously.

Once certified you will be listed in the Cyber Essentials Business Directory and can display your accreditation mark on your site and materials. We can also work with you to ensure your IT system meets the official standards and successfully gains this accreditation.

Subscriptions available:
Annual

Proven to provide:

- Guided consultancy to ensure you are assisted every step of the way towards accreditation
- Customer reassurance that you are working to secure your IT against cyber attacks
- A clear picture of your organisation's cyber security level
- Accreditation for those Government contracts that require Cyber Essentials certification
- The first qualification towards achieving the Cyber Essentials Plus and further accreditations

Benefits to your organisation:

- Attract new business with the promise you have cyber security measures in place
- An audit of the cyber security posture within your organisation
- The opportunity to address those areas that could provide a cyber risk to your key systems and data

Technology alone will not prevent you from falling victim to a cyber-attack.

We stop employees from causing security incidents with our fully managed Security Awareness Training and Testing service.

Our online training provides your workforce with the toolkit necessary to understand and spot modern day cyber threats. The only way to change employee behaviour, so not to put your organisation at risk, is through regular testing. Our Monthly Phishing emails are targeted and randomised to ensure staff are tested as individuals.

Save time, money and resource by choosing our bespoke fully managed service. We keep simulated phishing attacks realistic by researching your organisation the same way a cybercriminal would.

With our experts on hand to ensure that the risk within your organisation is at a constant 0%, our fully managed service is by far the most efficient way to deliver an effective Security Awareness Training and Testing program that every organisation needs.

Subscriptions available:

Monthly
Bundle (upon request)

Proven to provide:

- Fully managed service
- Detailed Baseline phishing report
- In-depth online training with quizzes
- Multiple language support
- Completion reminders
- Bespoke, randomised monthly phishing
- Accumulative phishing reports
- Remedial training
- 0% click rate

Benefits to your organisation:

- Protects your organisation from targeted cybercrime
- Changes employee behaviour
- Helps towards ISO 27001 compliance
- Staff turnover included
- Protect employees in their personal lives

PHISH999
defence

PHISH999 defence

Regardless of your current email security solutions, how many unwanted, phishing and potentially harmful emails still land in your employees' mailbox every day?

Whether you rely on Microsoft 365 or GSuite alone for email protection, or if you already have a filtering solution in place, it is likely that some unwanted emails continue to slip through to your employees. With phishing attacks ever evolving, the risk of falling victim to cybercrime is greater than ever.

Phish999 combines advanced, patented AI technology and a unique user awareness experience to protect your organisation from harmful phishing attacks and boost employee vigilance towards cybercrime.

Phish999 identifies suspicious emails through CEO impersonation, new and untrusted senders originating from outside of your organisation, suspicious content and potentially malicious links and attachments. If any of these criteria are found, Phish999 displays an alert banner to each employee, empowering them to report the email or mark it as safe. The AI learns from this and adjusts its filtering to block any future threats.

Subscriptions available:

Monthly
Bundle (upon request)

Proven to provide:

- Powerful phishing protection
- Alert banner
- Insights dashboard
- Auto quarantine flagged emails
- Forensic investigation
- SIEM integration

Benefits to your organisation:

- Protects your organisation from harmful phishing attacks
- Boosts user awareness towards phishing attacks
- Provides an additional layer of email security

PHISH999 | POWERFUL PHISHING DEFENCE

POLICY acknowledgement

POLICY acknowledgement

Policy management doesn't need to be costly, complicated and time consuming. Use our MPAS service to have your policies delivered seamlessly to your workforce, tracked and receive recorded acceptance for each employee.

Traditionally, company policies are delivered either through costly and cumbersome management consoles or over internal email. Both options require man-hours that are better spent elsewhere.

Our Managed Policy Acknowledgement Service (MPAS) is a simple solution to a pain felt by most organisations. Our team will firstly host your policy on your own branded landing page. Then we will distribute the policy to your employees. We track acceptance of the policy and can even construct a short quiz to prove understanding. This is all reported back to you for your records.

Also included are 12 standard policy templates, should your organisation require them.

Subscriptions available:

Monthly
Bundle (upon request)

Proven to provide:

- Fully managed service
- Branded landing page with hosted policy(s)
- Delivery of policy to employees
- Recorded acceptance
- 12 standard policy templates

Benefits to your organisation:

- Saves time, money and resource
- Prove staff have accepted your corporate policies
- Prove staff understand your corporate policies

CyberSIGHT
Credentials Breach Monitoring

Have your organisation's credentials been compromised? Lost or stolen passwords that appear on the Dark Web can be all a criminal needs to access your critical business systems and applications.

It is a known fact that employees use their corporate email accounts, and often corporate passwords, to sign up to third party sites and applications. If these sites or apps are breached, your employee's email address, passwords and PII is obtained by criminals and distributed through an 'underground' network known as the Dark Web.

This poses a serious threat to your organisation as nearly 47 percent of people say there is no difference in their passwords used for personal and work accounts.

CyberSIGHT, our Dark Web Monitoring service, goes to the deepest, darkest areas of the web to find stolen credentials on your corporate email accounts and produces comprehensive reports and real-time alerts when evidence of a breach is found.

Subscriptions available:

Monthly
Bundle (upon request)

Proven to provide:

- Free Dark Web report on your corporate domain
- 24 x 7 x 365 monitoring
- Breach alerts
- Monthly reports including breach source and stolen information
- Remediation advice
- Supply chain monitoring

Benefits to your organisation:

- Immediately protect yourself against existing threats from stolen credentials
- Ongoing protection against future breaches and stolen credentials
- Fully managed, saving you time and resource
