

HILLER AIRCRAFT

UH-12E SERIES HELICOPTERS

Hiller UH-12E Hauler

The UH-12E delivers more lift per dollar than any other helicopter in the world.

There's a reason why the Hillier UH-12E is one of the most popular light helicopters ever built. It gives operators what they want most:

Low price. Performance. Economical operating costs. High reliability.

This rugged machine will lift more than anything else in its class.

It's flown hundreds of different types of missions. In all climates. And at all altitudes.

In fact, the UH-12 holds the world's altitude record in its weight class for reciprocating engines — 27,915 feet.

To date, over 2,500 Hillier helicopters have been delivered to satisfied customers on six continents. And that's just the start. The longer the UH-12E is in service, the more popular it becomes.

Ag operations — a Hillier specialty.

Among agriculture helicopter operators, the UH-12E has become as famous as the John Deere tractor. With full fuel, it still carries substantial loads of insecticide or other applicant. And the 305 hp Lycoming engine provides maximum reliability and economy.

Because of its ability to make tight turns, the UH-12E is up to 38% more efficient than a fixed wing

aircraft. Each pass saves approximately 22 seconds. And you can load and refuel a helicopter in the field, for greater time savings. This also eliminates the need for airstrip operations.

The downwash from the UH-12E's rotor also provides better crop penetration and increased drift control. You can spray the corners and edges of fields without skips or burns.

The best helicopter for the job.

The UH-12E isn't just limited to agricultural spraying. It's also excellent for cattle mustering, predator control, pipeline, powerline and fence patrol, and forestry and fishing operations.

Naturally, the UH-12E has seen service with the military. And it's been used successfully by ski patrols, search and rescue squads, photographers and law enforcement agencies.

The UH-12E is also an excellent flight trainer, and has been used as an air taxi. There's just no end to the many tasks it can do.
